Your career starts here.

The AGFC places heavy emphasis on the continued education of its employees, offering pay increases for those obtaining continued professional certification. Biologists have the opportunity to stay at the top of their field by attending workshops and other training sessions as part of their jobs. Involvement in regional and national resource management associations is encouraged.

Career opportunities associated with warm, cool and cold water fish culture, fisheries management, and special programs are available with the AGFC. Biologists are given wide latitude in taking on self-determined research and management projects.

To learn more about the Fisheries Division, visit www.agfc.com.

How to apply

Arkansas: A natural fit for FISHERIES PROFESSIONALS

ARKANSAS GAME AND FISH COMMISSION Fisheries Division

Chuck Haralson, Arkansas Department of Parks and Tourism

Looking for a challenging and rewarding career in fisheries management?

Arkansas has it all.

More than 600,000 acres of lakes and more than 90,000 miles of rivers and streams offer biologists many opportunities.

Known for its world-class warmwater and coldwater fisheries and home to a number of world-record fish, The Natural State is one of the top 10 fishing destinations in the country.

Deep, clear highland reservoirs, coolwater Ozark streams featuring blue-ribbon smallmouth fisheries, large warmwater oxbows of the Arkansas River, and cold tailwater trout havens of the White and Little Red rivers – no matter what your focus of study, the Arkansas Game and Fish Commission has something to offer. AGFC biologists are blessed with a fantastic variety of opportunities to apply their education and skills and gain experience in multiple fields of study.

Make a difference

The AGFC recognizes the vital role partnerships play in the success of projects and fisheries management. Fisheries professionals in Arkansas are not only biologists, they are the AGFC's ambassadors to the public and government agencies. Through these partnerships, our staff has the opportunity to make a significant difference in the quality of our resources and the enjoyment of anglers and other outdoors enthusiasts.

Thanks to the 1/8th-Cent Conservation Sales Tax which brings in additional funding, AGFC fisheries biologists are able to receive funding for many innovative projects and research to make an impact in the future of fisheries management. Biologists are encouraged to make a difference through independent, self-directed special projects.
